

The dnp Supernova Blade is an elegant, frameless front projection screen that is ideal for use in meeting rooms, retail stores and residential applications. Only 3mm thick and available in sizes 100", 110" and 120" in 16: 9, it meets modern customers' demand for flatter, wider screens which maximise image size while reducing the space requirement of the overall installation.

dnp optical front projection screens

The screen's clean look and slim-line format suit modern architecture and interiors perfectly. At the same time, the dnp Supernova Blade performs superbly, providing a great viewing experience, even in brightly lit environments.

dnp optical front projection screens

Made with ISF-certified Supernova 08-85 or with 23-23 material, dnp Supernova Blade has a built-in optical filter which absorbs ambient light and boosts contrast. The result is vivid, sharp images with up to 7 times higher contrast than conventional front projection screens. The screen's light-absorbing capabilities eliminate the need for a dedicated darkened room and thus extend the opportunities for quality viewing into a much broader range of environments. There is no need to draw the blinds in meeting rooms, and in home entertainment installations, there is no need to wait until after dark to start the movie.

Flexible and easy installation

The Supernova Blade is easy to install and can be mounted in two ways: either hung on the wall or suspended from the ceiling. When wall-mounted, its super-slim format gives the effect of a 'window on the world'; when suspended from the ceiling by almost invisible wires, the effect is even more dramatic. It appears to be floating in mid-air. Besides being

aesthetically pleasing, the screen design is also space-saving - an additional advantage in retail situations, where every square metre counts.

- > Frameless, space-saving design
- > Minimal screen thickness - only 3mm
- > Standard sizes 100", 110" and 120" in 16: 9
- > Custom sizes available
- > Easy to install on wall or ceiling
- > Performs in brightly lit environments
- > Up to 7 times higher contrast than conventional front screens
- > ISF-certified screen material available
- > Compatible with all standard projectors
- > 4K compatible

Awards

dnp optical screens have won numerous awards including the Best Buzz Award at InfoComm, Honoree Awards at CES and the Excite award at CEDIA US 2007.

7 layers for up to 10 times more contrast

The Supernova Screen is made up of 7 high-tech layers that actively ensure a superior viewing experience. Layers include:

- > Unique optical lens film to reduce the impact of ambient light and ensure better image contrast.
- > Technologically advanced reflection layer for revolutionary half-gain angles up to +/- 85°.
- > Black colour layer that sets new standards for colour reproduction.
- > Hard surface coating for screen scratch resistance and easy handling and a no-shimmer image.

These unique properties have earned Supernova 08-85 screen material ISF approval.
